Quick Live Survey

Julia's Weaknesses

HPC with Julia
is a niche.

Join at conferences ...

... or in the monthly Zoom call
(open to everyone!)

No great way to
produce (small)
binaries.

Achieving
high performance
can be tricky.

Julia's Strengths

Julia is **interactive**
and **convenient**.

Julia has a great package manager

Laptop

```
→ ~/myproject tree
.
├── Manifest.toml
├── Project.toml
└── code.jl

0 directories, 3 files

→ ~/myproject cat Project.toml
[deps]
CUDA = "052768ef-5323-5732-b1bb-66c8b64840ba"
DifferentialEquations = "0c46a032-eb83-5123-abaf-570d42b7fbba"
MKL = "33e6dc65-8f57-5167-99aa-e5a354878fb2"
MPI = "da04e1cc-30fd-572f-bb4f-1f8673147195"

→ ~/myproject █
```

HPC Cluster

```
→ bauerc@n2login3 myproject julia --project

Julia code can be
fast and **scalable**.

Example: Good scaling of PDE codes

Trixi.jl (Multi-CPU)

ParallelStencil.jl (Multi-GPU)

Julia invites you to
gradually **delve deeper.**

Julia makes it easier to become a developer.

Let us delve deeper!
